

Restoring vision with subretinal implants

Dr. Timo Lebold

Retina Implant AG, Reutlingen, Germany

approx. 5000 AMD-incidences/year
in Germany (2008: 4 Mio. AMD patients in total)

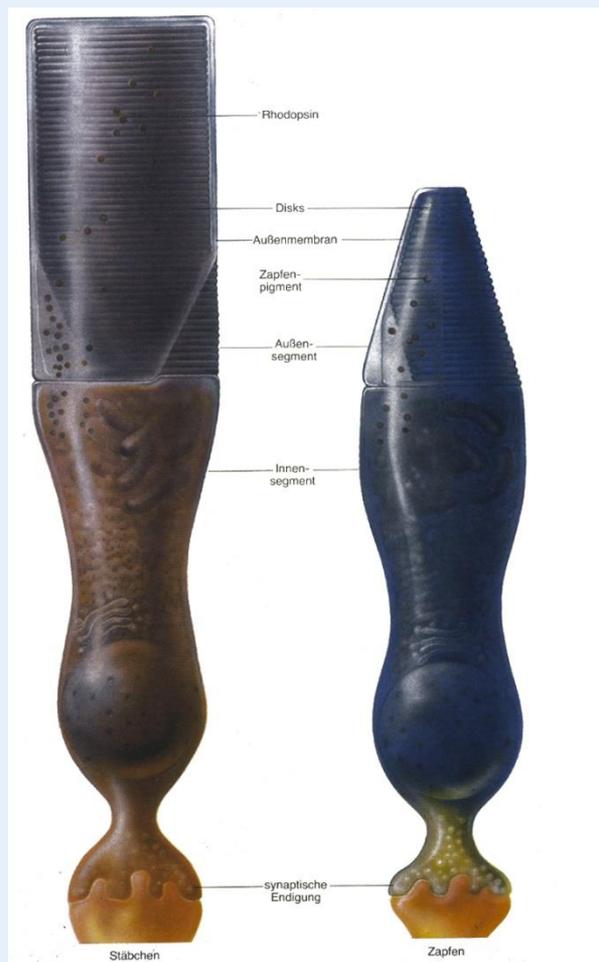

30.000-40.000 RP patients in Germany
(1 out of 3000 – 7000)

Rods

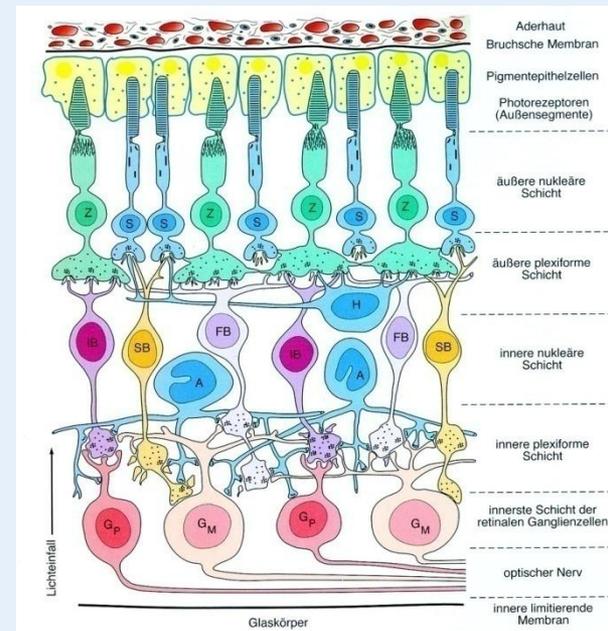

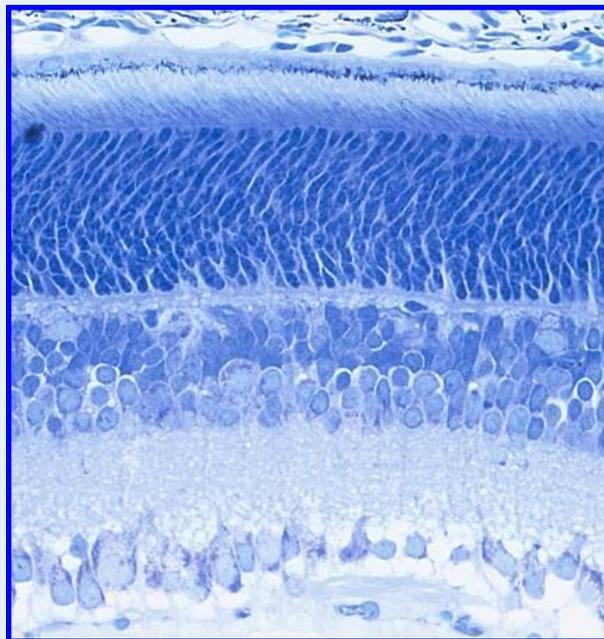

High sensitivity
Low spatial resolution
No colour discrimination.

The Retina

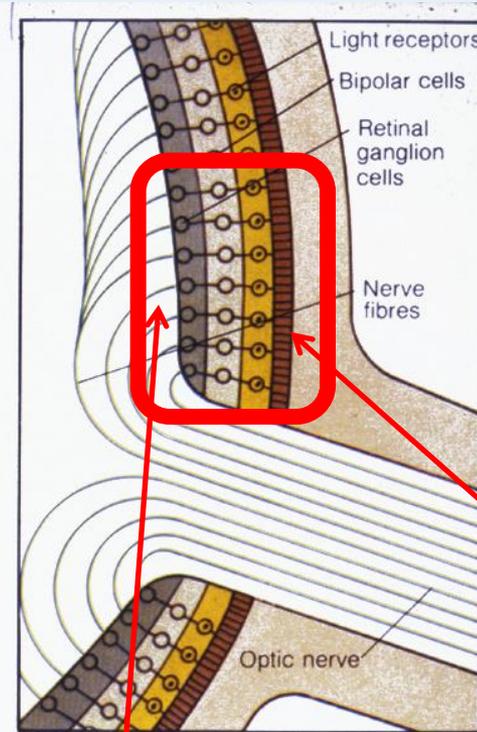

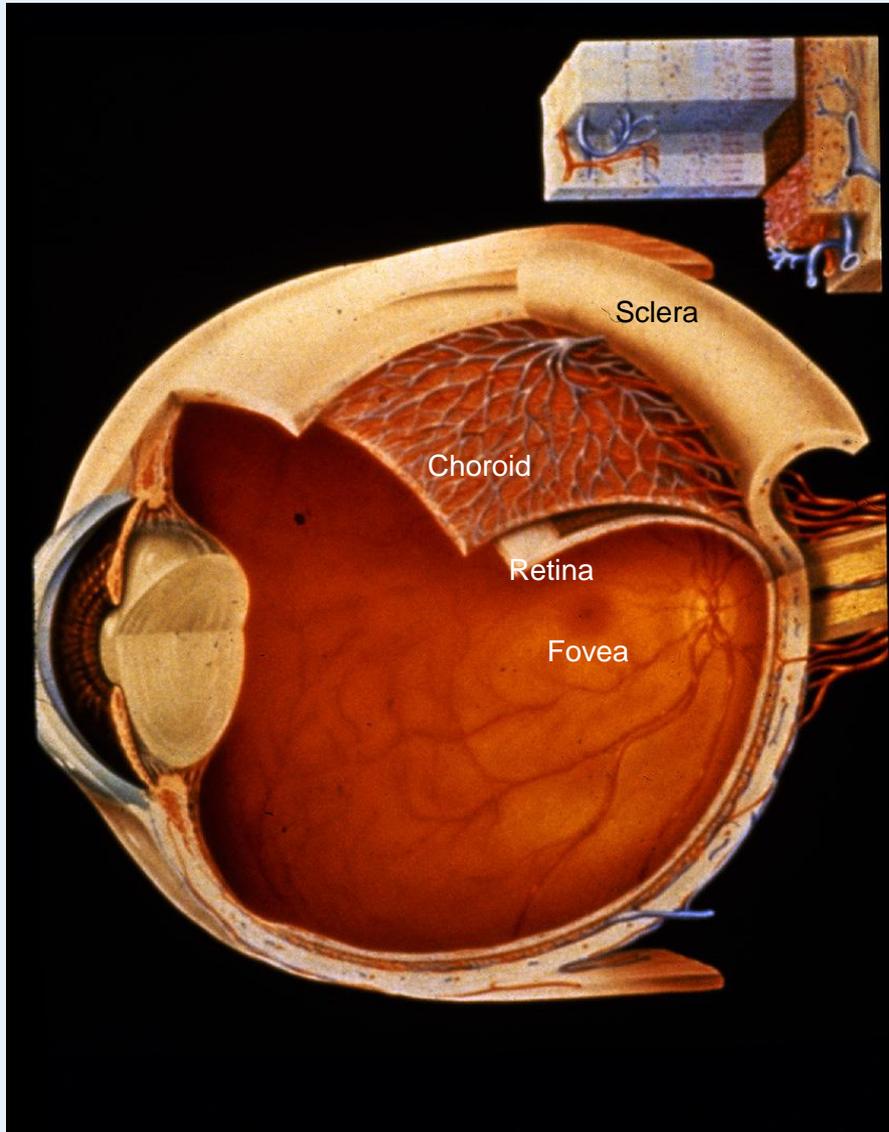

Cones

Low sensitivity
High spatial resolution
Colour discrimination

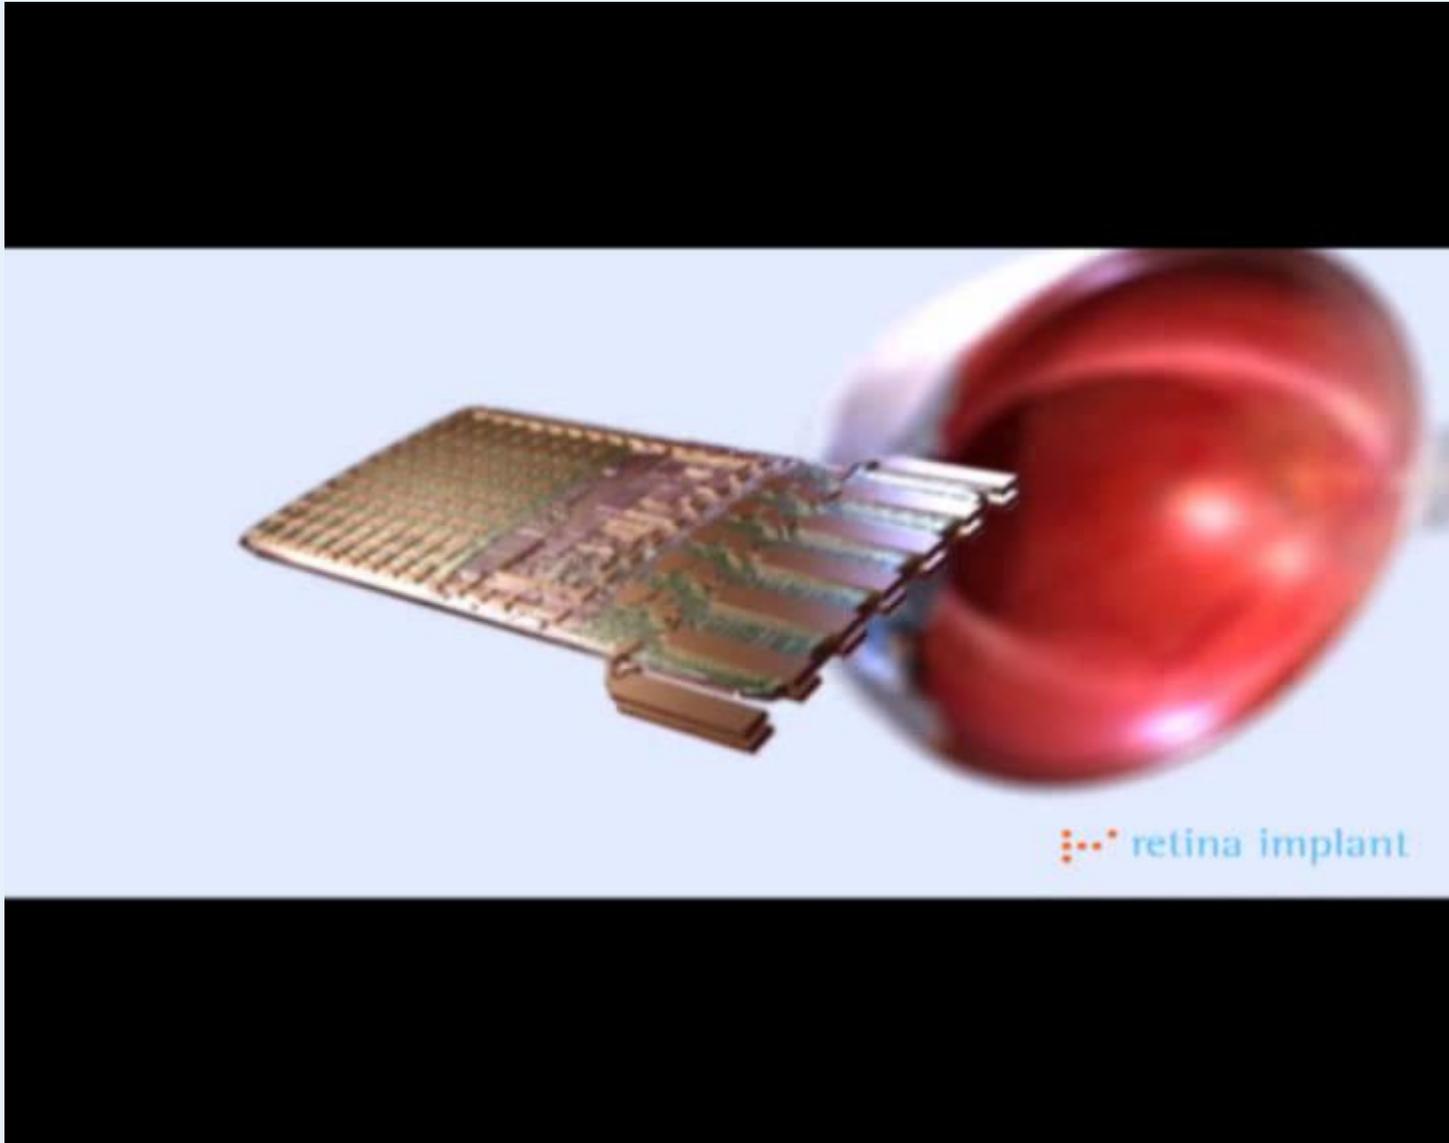

The Principles of Retinal Implants

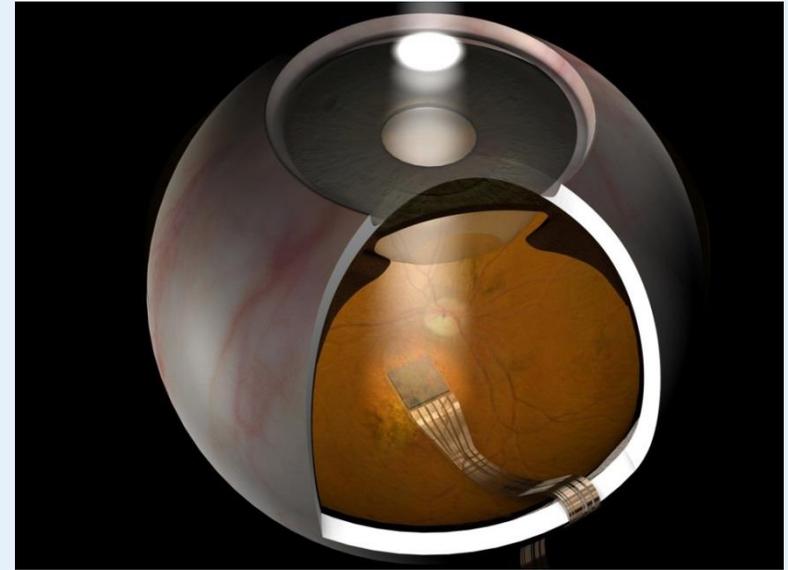

SUB
Light sensor
under the
retina

EPI
Light sensor
Outside body

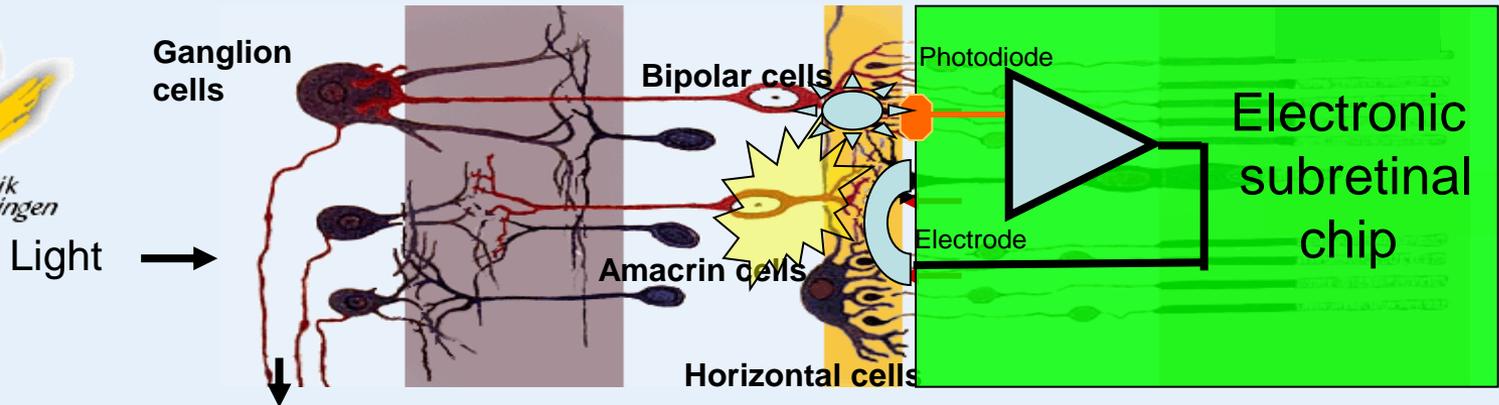

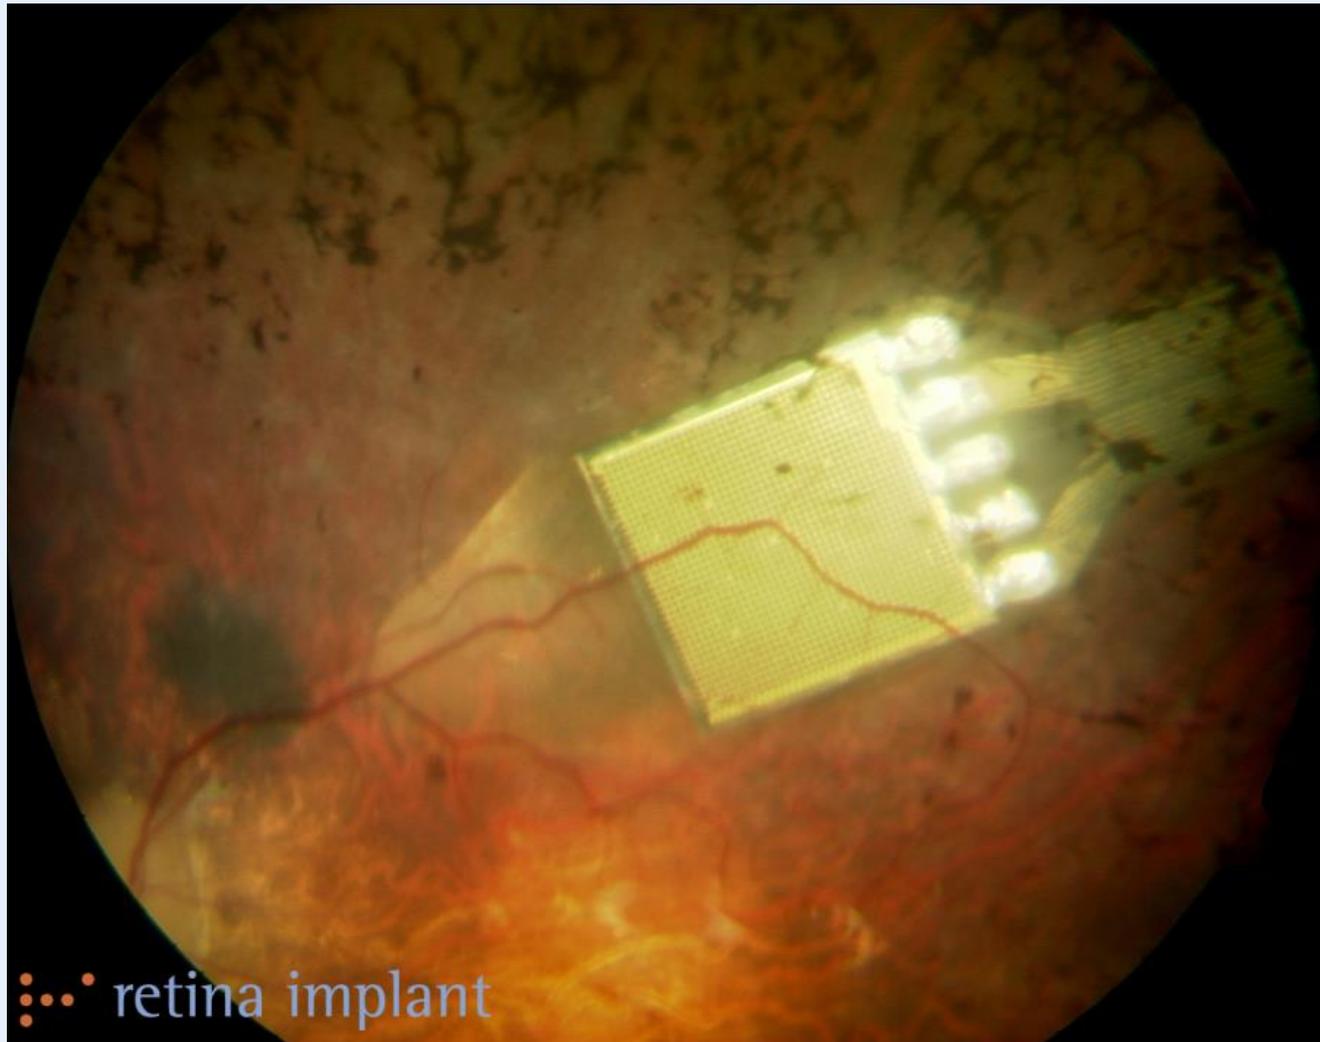

Why a subretinal approach?

- 1500 Photodiodes and electrodes connect to the retinotopic correct localization
- Remaining retinal network can be utilized
- Fixation of the chip is easier
- Natural eye movements

Universitäts-Augenklinik
Tübingen

The Tübingen Approach for a Subretinal Implant retina implant

SUBRET-Project (funded by the German government) (1996-2003)

Retina Implant AG (founded in 2003): 10 years – 30 mio. €

**Projektleitung, Diagnostik, Humanimplantation:
University Eye Hospital Tübingen**

**Chipdesign & -
Manufacturing**

Surgical technologies

Animal experiments

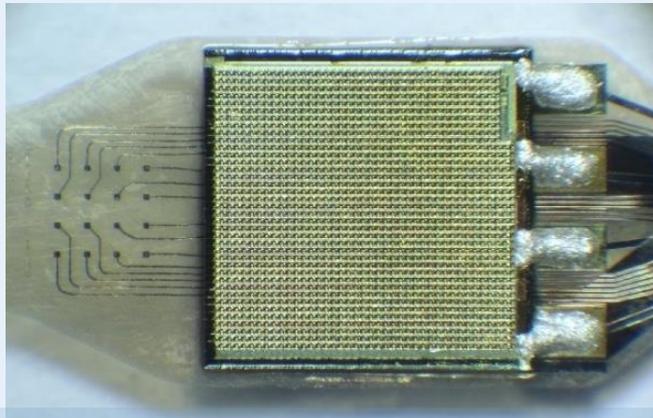

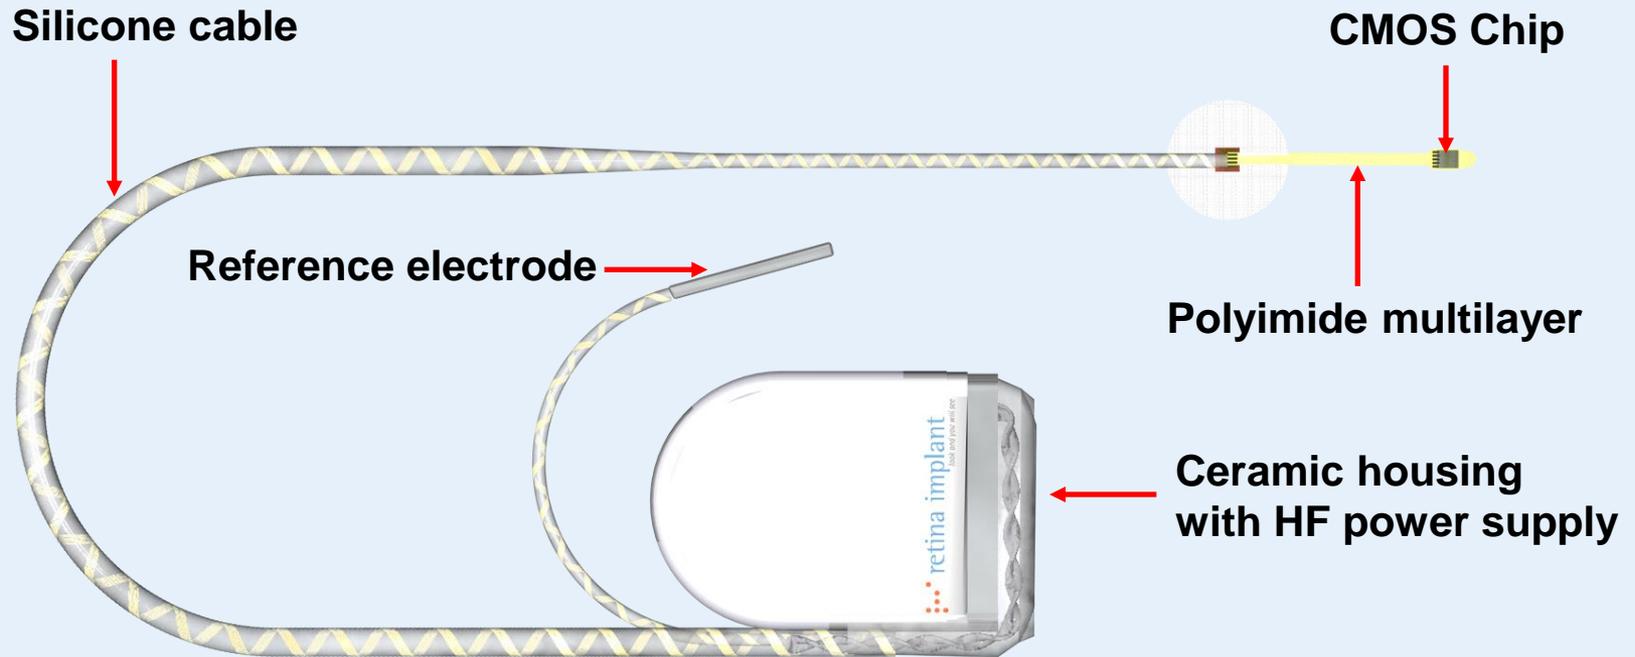

Power supply

**In-vitro tests,
thin film coatings,
flexible substrates**

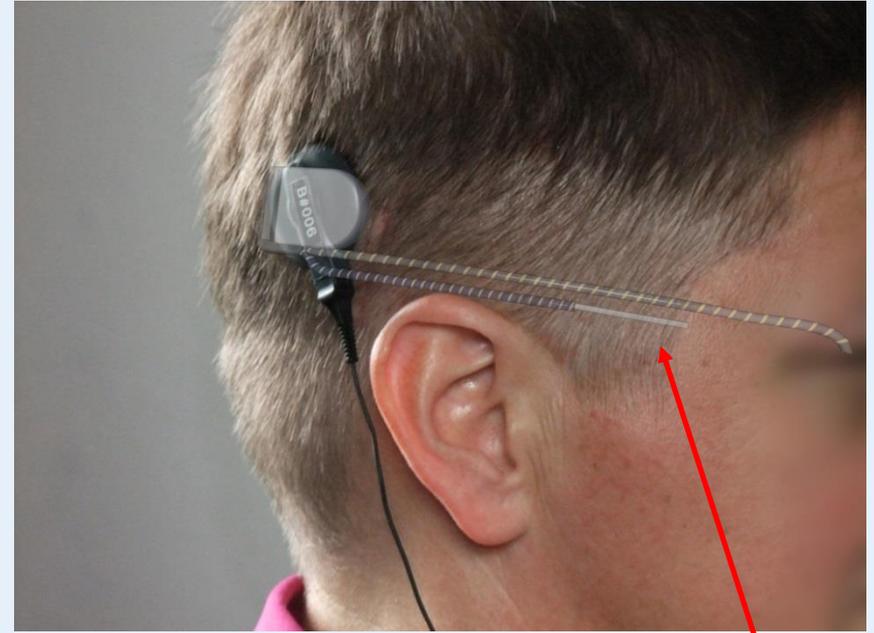

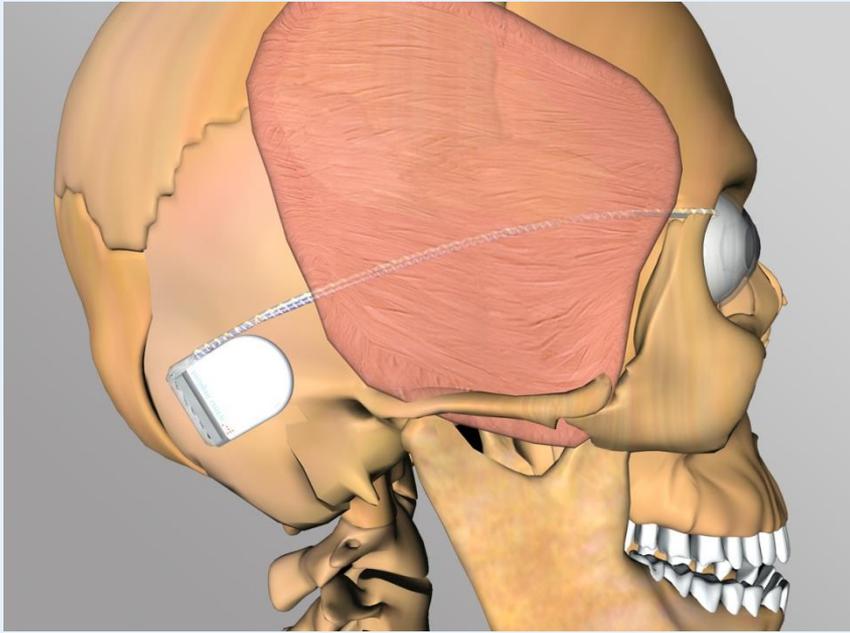

Microchip: 3 x 3 mm, 70µm thickness, 1.500 pixels.

MCS Multichannel Systems GmbH

External Supply Unit

Return electrode

- ✓ Only handheld device external, all key components implanted and thus invisible.
- ✓ Chip (1500 pixels) automatically follows eye movements.
- ✓ Utilization of the remaining network of nerves.

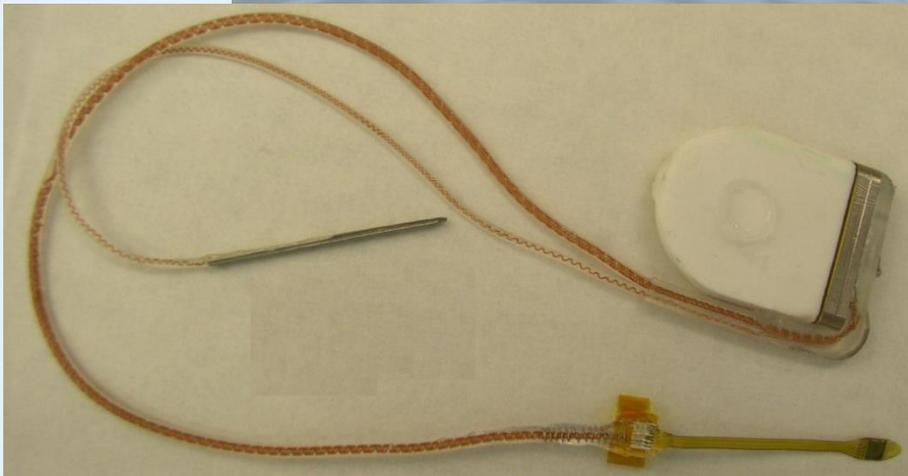

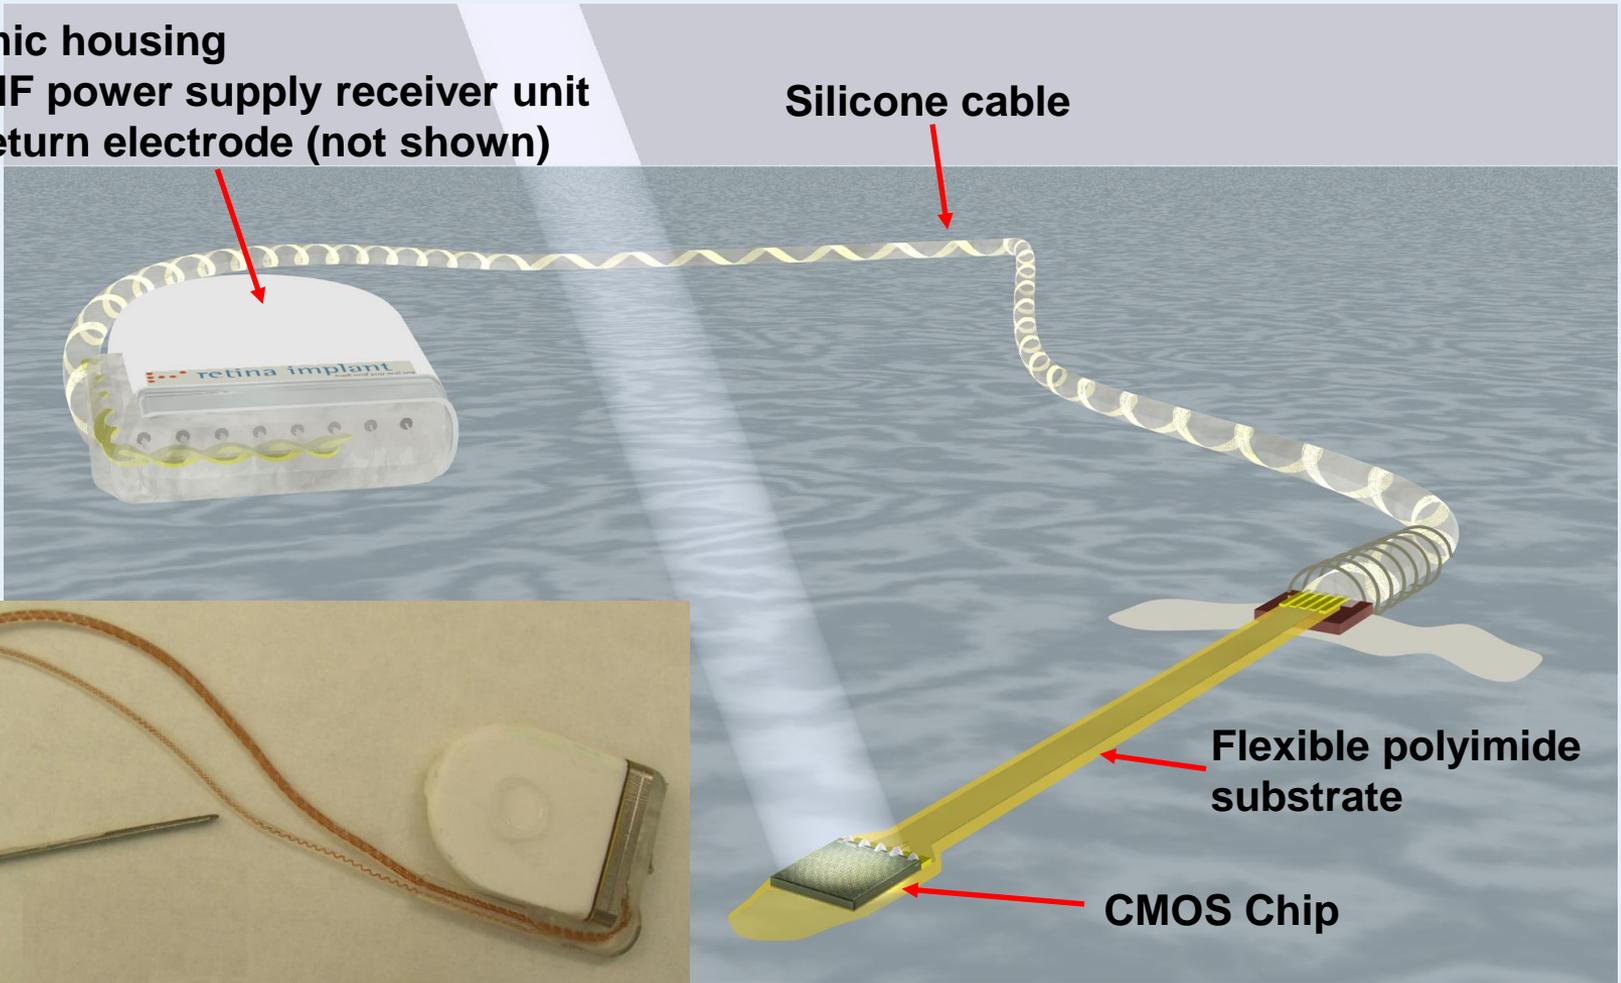

Challenge: Long-term stability

Ceramic housing
with HF power supply receiver unit
and return electrode (not shown)

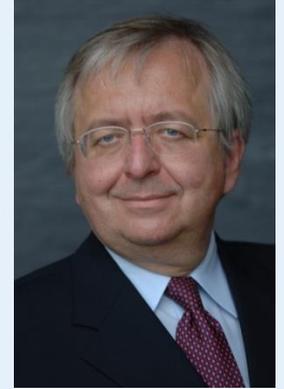

Silicone cable

Flexible polyimide
substrate

CMOS Chip

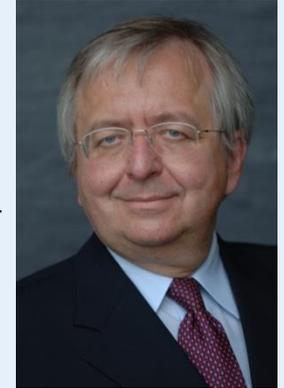

„Aktive Implantate: das ist so schwierig, wie einen Flachbildschirm in Seewasser zu werfen, und zu verlangen, dass er 10 Jahre lang ununterbrochen läuft...“

**Presentation ZVEI Frankfurt
Nov.2009**

„Aktive Implantate: das ist so schwierig, wie einen Flachbildschirm in Seewasser zu werfen, und zu verlangen, dass er 10 Jahre lang ununterbrochen läuft...“

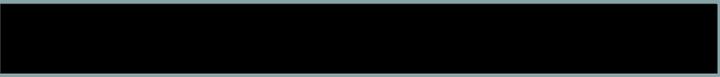

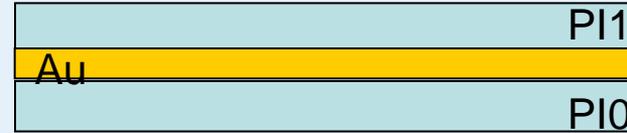

Presentation ZVEI Frankfurt
Nov.2009

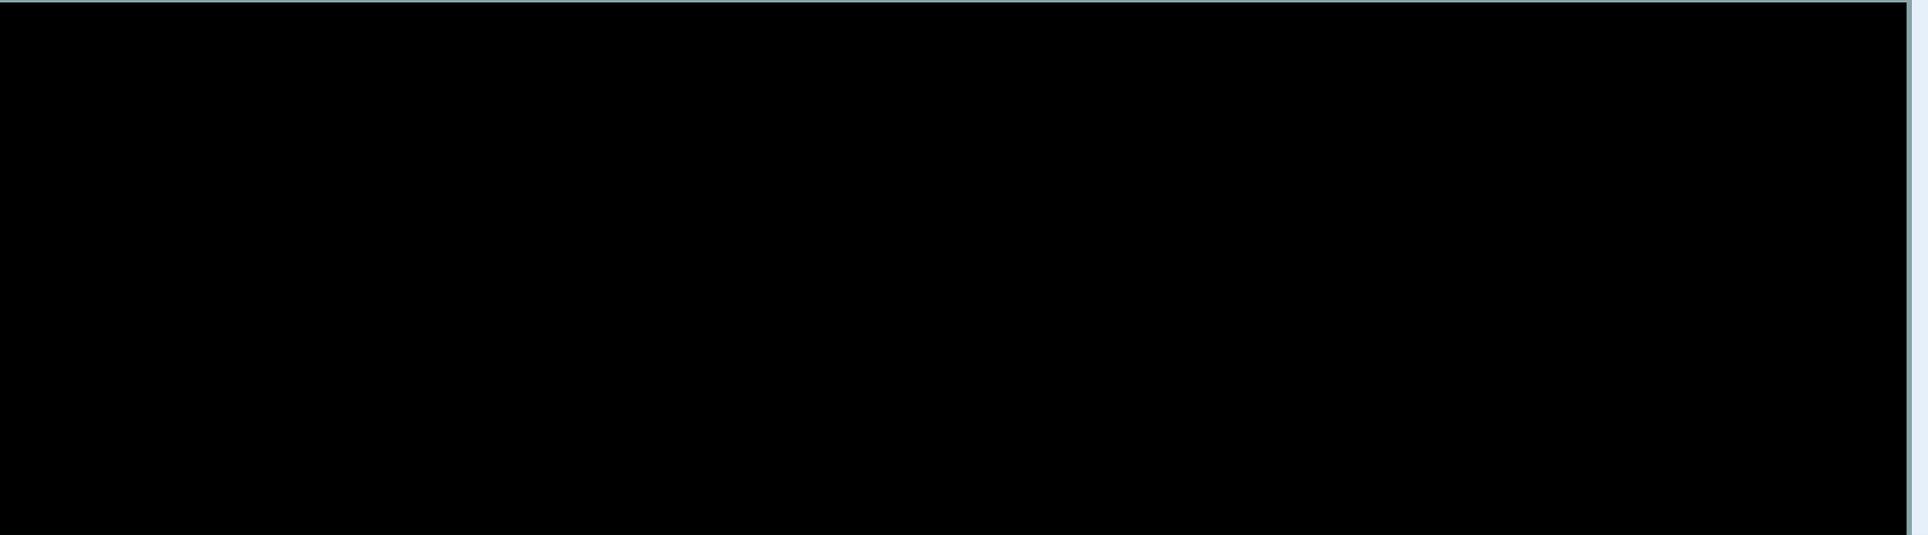

Cebit, Hannover, 2012

Notified Bodies (TÜV, FDA
etc.):
10 year lifetime target
Not achievable for novel
products and technologies.

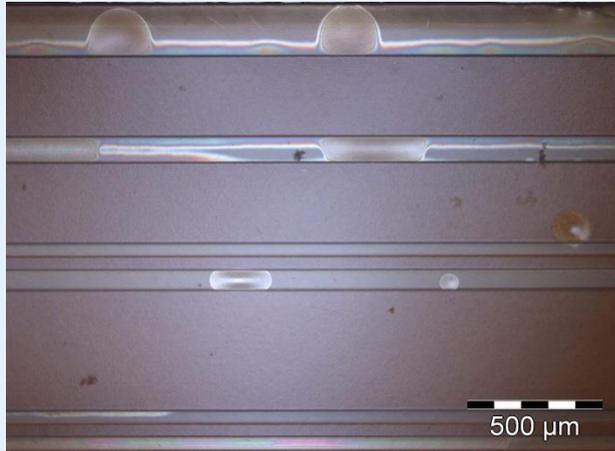

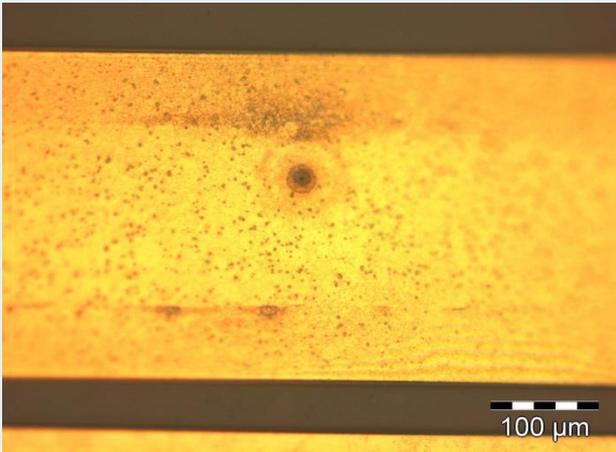

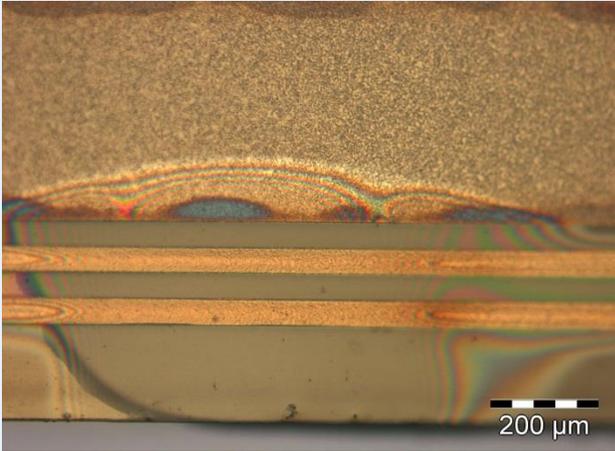

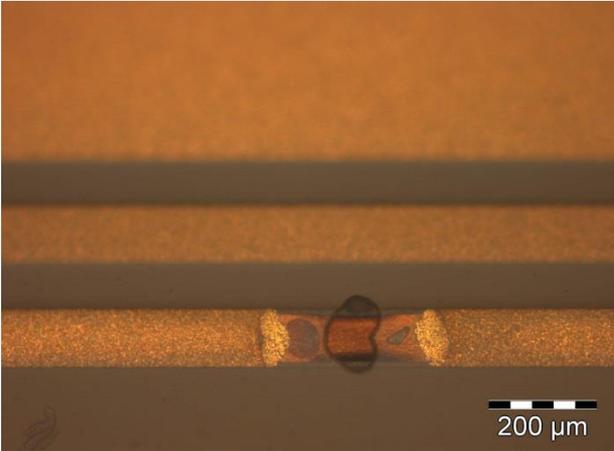

Polyimide foil substrate

-
- Different lengths available due to variations in eye size: 30, 35, 40, 45, 50mm
- Gold leads (sputtered or galvanized)

Typical failure patterns for foil substrates

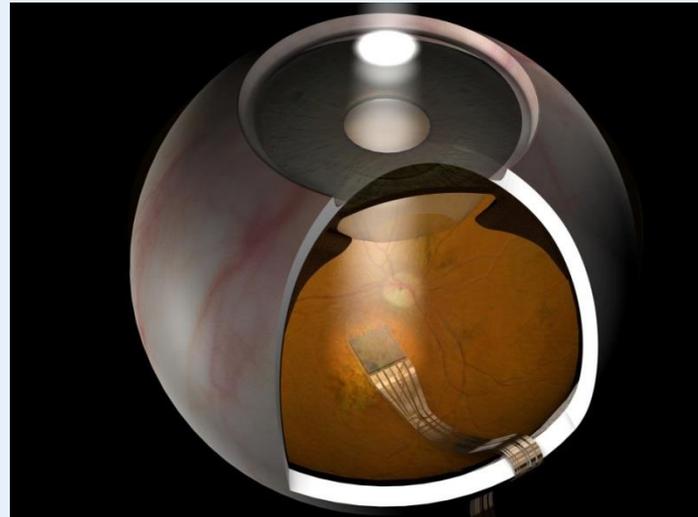

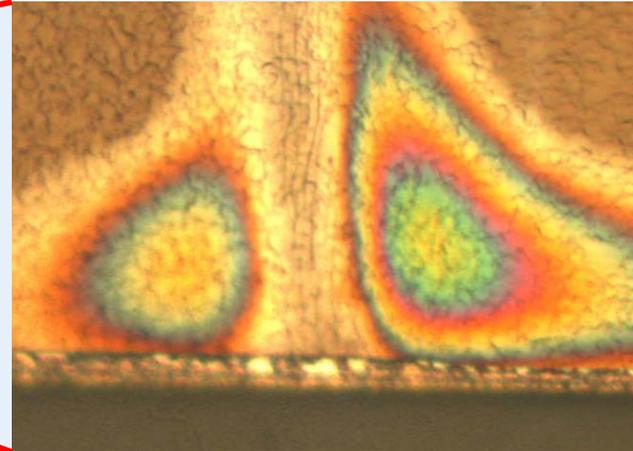

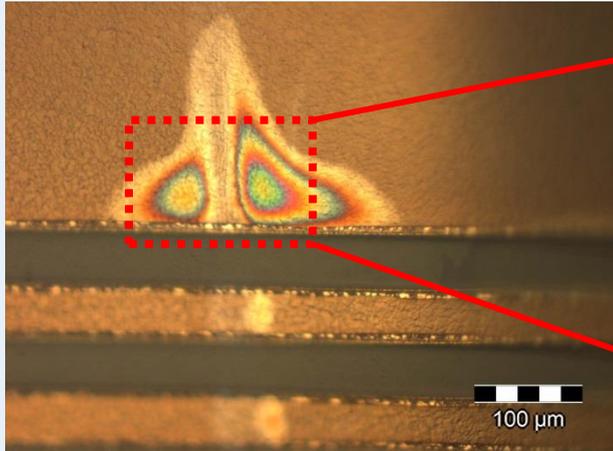

pinholes

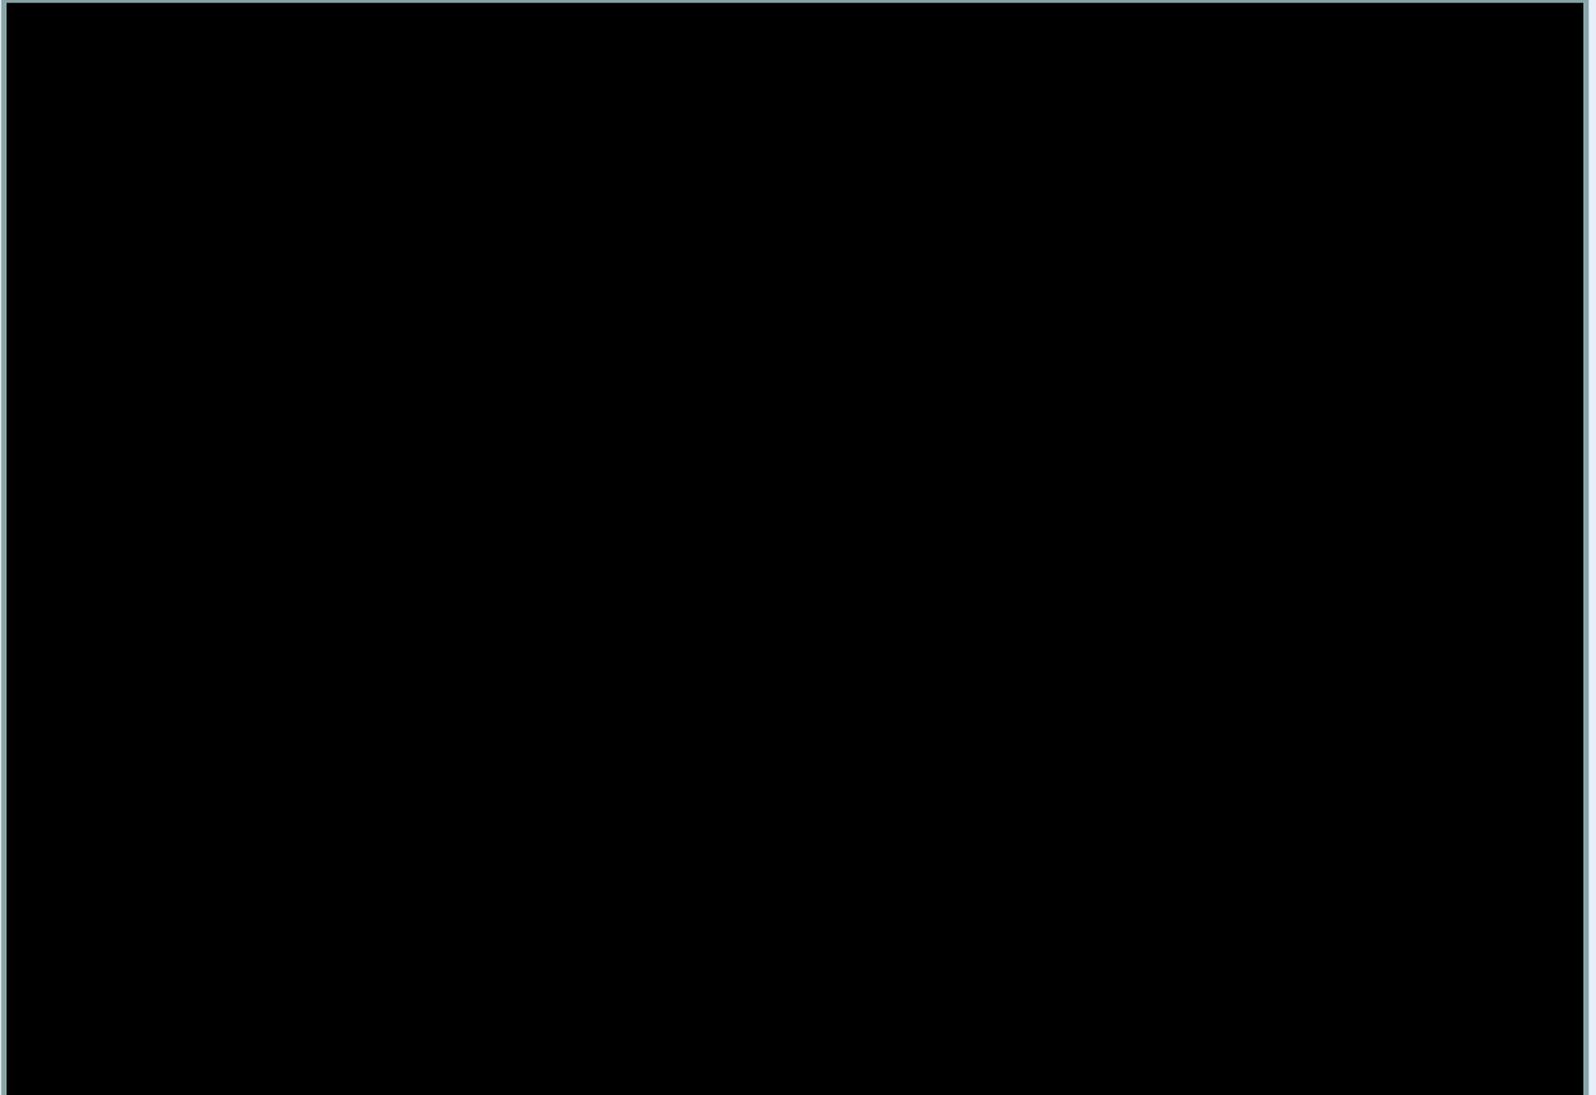

delaminations

Mechanical Strain

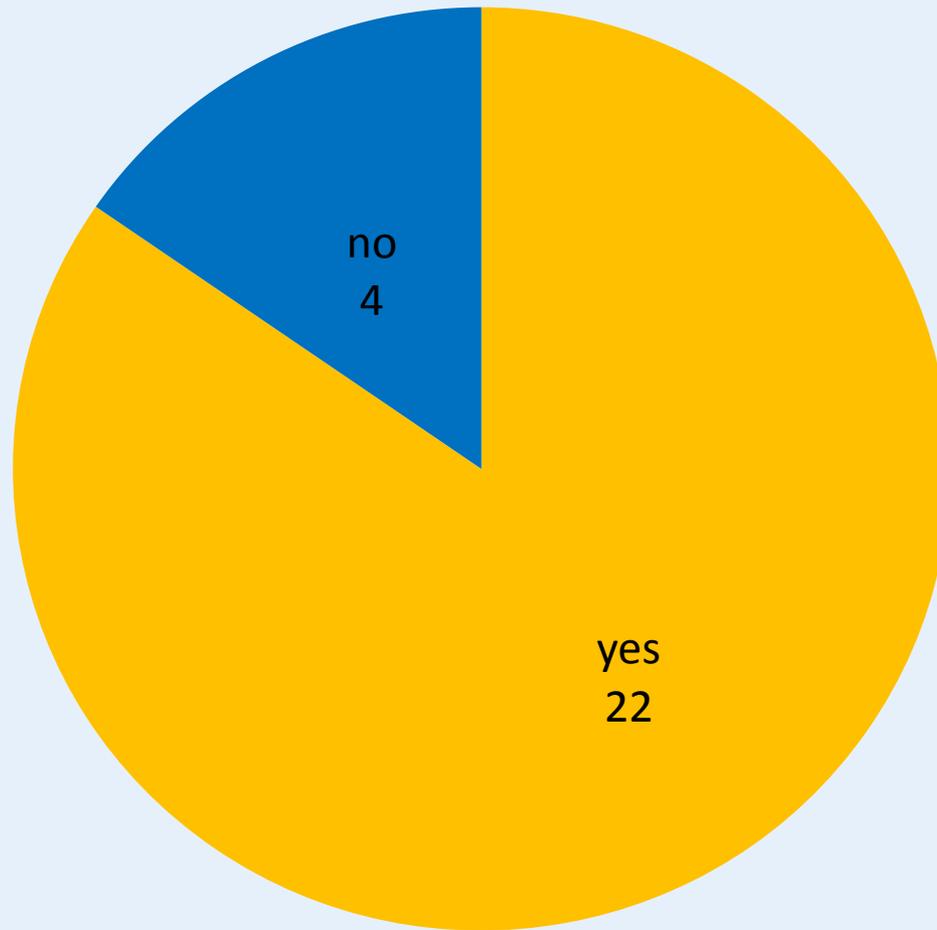

Low Bending diameters: 270 μm (stainless steel wire)

Mechanical Strain

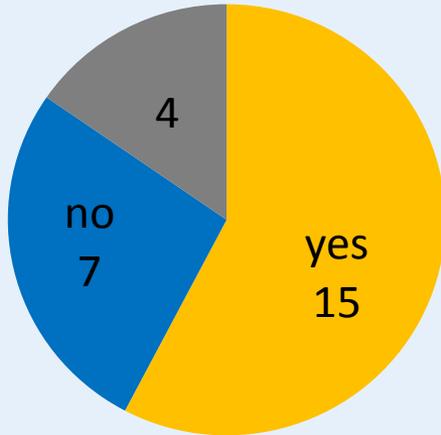

Light perception

No perception:

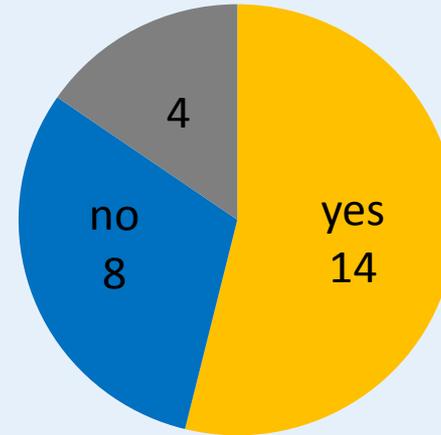

- TU-01 optic nerve problem
- BU-01 retinal swelling after repositioning
- HK-02 vascular problems
- SI-01 technical problem

Light source Localization

People	shape of head; face: eye part, mouth shape, teeth; glasses; bracelet; characteristics of dresses; heads of colleagues during work group meeting; darkhair vs. blond hair; rim of glasses; people sitting on chairs in the garden; person bending to his laptop; silhouette of a visitor on the couch; moving heads ("bananas"); ground daughter in white baby-dress; shoulders silhouette; face as a triangular flash; white scarf around the neck;	8
Houses	windows; house outlines; white papersheet hanging on the door; door knob; silhouette of Tübingen town-hall; locate doors or door frames; walls; chimney margins; locating edges of steps; size of the windows; curtain stripes	10
Streets	white pile on the street; street lamps showing the direction of the street; fireworks; shop signs in darkness lit up (not reading); lines of the pavements; landmarks; arches of a viaduct;	5
Cars	car reflexions; car lights at night moving; bus lights; telling 2 bus companies; sitting in the car at night: car lights as "fireflies";	4
Nature	sunflower stalk in the garden; parasol in the garden; horizon; river on the horizon (sun reflexion); blooming flowers in the garden; goose swimming in the pond; outline of the dogs; dogs wagging the tail; could walk around a garden table and sit down; moon	4
Reading	Signs on the street (lighting): ADAC, VAPIANO	1
Own body	own fingers in front of the TV screen; own hand; head silhouette in the mirror; own striped jacket in the mirror	3
Near / At home	Frame of a picture with texture of the image; lamp-post; fluorescent tubes; kitchen objects such as plates, etc. in good contrast; washing basin; trash can; clock on the wall (not reading hours); square-shaped carpet in the next room; frame of the TV; cup handle; small bottles; red vs. white wine; dark vs. milk chocolate; noodles vs. beef; objects on the working desk (staples, phone, etc.); glass and cutlery on the table; picking up hot steam while cooking;	9
